STATE OF ILLINOIS

ANNUAL PLANNING INFORMATION REPORT

FISCAL YEAR 1984

Introduction

This Report has been prepared to assist the planning efforts of employment and training agencies, Private Industry Councils, social service organizations, educators, vocational and guidance couselors, and other interested parties. The Report includes a review of employment trends and an evaluative outlook for the coming year. Data on the labor force, population, and special segments of the population and job-seeking public are discussed. In all cases, the most current data available have been used.

Description of the Area

The state of Illinois had a total population of 11,426,518 according to the 1980 Census. This represents a 3.3 percent increase from the 1970 figure. In 1984, the projected population will be 11,476,900--less than half a percentage point gain from 1980. As in past years, the dominant racial group will be Whites, representing 79.1 percent of the population. There will be more women than men, in the adult age groups, regardless of race. Teenagers and young adults (persons who are between the ages of 16 and 21) will represent about ten percent of the total population. This proportion for 1984 is slightly higher among Blacks and other nonwhites than for the total. Table 1 shows the projected 1984 population data.

The 1984 Illinois labor force represents 5,754,500 persons, or 66.0 percent of the projected population, 16 years of age or older. Of this, 12.0 percent are projected to be unemployed in 1984. The unemployment rate for Whites will be less than ten percent, whereas the rate for nonwhites will be 22.2 percent. (For 1982, the overall unemployment rate was 11.3 percent; Whites were 9.2 percent and nonwhites were 24.1 percent.) As usual, teenagers and young adults will have the highest unemployment rates of all age groups, regardless of race or sex. Table 2 shows the projected 1984 labor force data.

Labor Supply and Demand

Persons in need of employment and training services are represented by Job Service applicants as shown on Table 3. More than two-fifths of all JS applicants, as of September 30, 1982,were economically disadvantaged. More than half of these were women (53.0 percent) and most were from minority groups (68.0 percent). When the economically disadvantaged are excluded, these proportions tend to reverse.

Nonfarm wage and salary employment opportunitites for all Illinois job seekers have shifted away from factory/manufacturing establishments toward service/nonmanufacturing establishments. As shown on Table 4, employment in manufacturing industries has droppped from 26.6 percent in 1978 to only 22.2 percent in 1982. Similarly, there was an overall decline in the number of persons at work in manufacturing industries from 1978 to 1982: a decline of 20.1 percent. In part, this downtrend is related to the current recession; since 1978 total nonfarm payroll employment dropped by 4.1 percent. However, the recession is not the total reason. Nonmanufacturing industries, reflecting the growing demand for all types of services (transportation, communication, finance, personal, health), added to its employment totals. Since 1978, nonmanufacturing employment grew by 2.2 percent, adding more than 60,000 people to these payrolls.

It is not surprising, then, that demand for white-collar workers has remained relatively high. In fact, the Illinois Job Service registered an overall increase in job openings during the first part of FY'83. From October '82 through April '83, employers listed nearly 63,000 job openings with JS, compared to 59,820 during the same period a year earlier. Most of the openings received during FY'83 were associated with nonmanufacturing industries: clerical, sales, service occupations. As shown on Table 5, the high demand for such workers resulted in relatively low ratios of job applicants to job openings. However, blue-collar occupations associated with manufacturing industries had relatively high ratios of applicants to openings, because of the low demand for such workers.

The low demand for blue-collar workers is also reflected in the occupational distribution of the insured unemployed (see Table 6). About two-thirds of the insured unemployed, for whom occupational information is available, had previously worked in an industrial/blue-collar job. The smallest proportion of the insured unemployed are found in service occupations where employment has been increasing (see Table 4) and JS job openings offer employment opportunities (see Table 3).

Outlook and Conclusions

The state as a whole during the coming fiscal year will show an improved economic picture. Nonfarm wage and salary employment is expected to stabilize in construction and in manufacturing, and to experience continued increases in the services/nonmanufacturing industries. Unemployment will remain high despite the fact that many people will be returning to work. This is because the number of job seekers increases as more jobs become available; persons who had suspended their job search will return to the labor force, replacing those unemployed who have found jobs. During fiscal year 1984, about 690,000 Illinoisans will be counted as unemployed.
